Fatima Al-Rashid	70%	10
Priya Nair	69%	13
Nadia Volkov	69%	16

Win rate by region

Win rate

Finding: Central wins 69.9% of its deals but averages \$1,905 per won deal; West wins 58.8% at \$2,559.

Why it matters: A high win rate looks good, but Central is winning lots of small deals. West wins less often and brings in more money per deal. Win rate alone can point the team in the wrong direction.

Action: The VP of Revenue should review Central's deal mix and set targets on revenue per rep, not win rate alone.

Loss reasons

Number of deals

Finding: Of 184 lost deals, "No Decision Made" (43) and "Poor Product Fit" (43) together account for 86 — that's 47% of all losses.

Why it matters: Neither is about price or competitors. "No decision" means the buyer never committed; "poor fit" means the deal shouldn't have been pursued. Both mean reps spent time on deals that were never winnable — the average deal takes 67 days, so that's a lot of wasted selling time.

Action: Sales managers should require a qualification check (budget confirmed, decision-maker identified, product fit verified) before a deal moves to Opportunity stage.
